EXPERIENCE

MIDDESK | Senior Software Engineer — Jan 2024 – Present | San Francisco, CA

- Led a team of 4 and reported to the CTO to launch a new AI-powered lead generation vertical, defining the strategy and technical roadmap. Worked with designers, AM's and SDR's across the stack to deliver and sell the product. Booked $1M ARR within 2 months of launching.
- Designed and implemented data ingestion pipelines for city and county permit data; stored unstructured documents in Pinecone to report actionable lead insights and custom scoring for new and updated businesses.
- Deployed an internal MCP server enabling non-technical teams to query live data and identify gaps in business verification. Exposed RubyLLM tools via schema introspection and added OAuth and user-level permissions.
- Rebuilt legacy Watchlist monitoring with a score-based algorithm, cutting false positives by 70% and boosting true match rates by 15%, independently validated to match and exceed government accuracy standards.
- Owned a high-throughput (10k RPS at peak) GoLang geocoding service powering address insights across all user requests and background pipelines for entity resolution.

FLOCK HOMES | Software Engineer — June 2022 – Jan 2024 | San Francisco, CA

- Transitioned inter-service communication from REST to gRPC and designed a GraphQL generator that auto-implements resolvers from protobuf RPCs with built-in support to generate dataloaders, resolver composition, and auth controls — streamlining developer workflow and cutting boilerplate code.
- Led the initiative to support multitenancy across the entire stack to support $1M+ ARR in SAAS deals, offering the core product to other funds as well as enabling Flock to manage multiple of its own funds.
- Developed job queue functionality as part of platform improvements to support async task handling, graceful retries, and nightly CRON jobs powering porfolio analytics and data ingestion.
- Templatized core user journey that facilitates the exchange of assets with the ability to include and exclude certain steps automatically based on user responses and admin overrides. Integrates with document e-sign providers, title companies, and KYC partners.

SAMSARA | Software Engineer — Apr 2021 – June 2022 | San Francisco, CA

- Worked on the Mobile Infrastructure team to develop solutions surrounding driver authentication, remote app signout, and mobile app performance improvements such as migrating from asyncstorage to MMKV.
- Revamped build infrastructure using terraform and buildkite to speed up mobile builds by over 10x. Optimized JS bundle size by using Hermes engine.
- Created a new API service using GoLang to monitor and manage industrial devices as part of the Connected Equipment team. Created dashboards using React to display data ingested from industrial gateways.

BLACKROCK | Software Engineer — Jul 2019 – Apr 2021 | New York, NY

- Developed a unified troubleshooting dashboard for 100+ clients using Vert.x, providing critical visibility into trade execution failures for Aladdin users.
- Built a distributed caching layer using Redis to reduce latency in compliance computations, integrating with existing C++ and Java workflows.

EDUCATION

UNIVERSITY OF ILLINOIS AT URBANA-CHAMPAIGN

BS in Computer Engineering | College of Engineering — May 2019 | Urbana, IL

SKILLS

LANGUAGES

GoLang • Python • Ruby • Java • Bash • SQL • Typescript/Javascript • HTML • CSS • C++ • C • Swift/XCode • Verilog • x86

FRAMEWORKS/OTHER

GraphQL • gRPC • GCP • AWS • Rails • Sidekiq • Kafka • SQS • AirFlow • PostgreSQL • BigQuery • Redis • ElasticSearch
MCP • Pinecone • Ollama • RubyLLM • Langchain • AutoGen • Vellum • React • React Native • NextJS • GatsbyJS • DBT
Temporal • FastAPI • Spring • Unix • Docker • Kubernetes • Terraform
